SANDHYA L
Senior Business Analyst | Banking, Healthcare & Insurance
+1 (203) 606-4745 | lsandhya0910@gmail.com

SUMMARY

Senior Business Analyst bringing 5+ years of experience in data management, analytics, data visualization, reporting, and business process improvement across banking, healthcare, and insurance. Proficient in SQL, Power BI, Tableau, Advanced Excel, and Power Query, with strong command of data validation, reconciliation, data quality, data modeling, and reporting. Partners with Finance, Operations, Technology, Compliance, and business stakeholders to define requirements for reporting applications, dashboards, data systems, and operational analytics. Consistently delivers ad hoc analysis, UAT, system documentation, process improvements, and user adoption initiatives that support data-driven decisions.

TECHNICAL SKILLS

Data & Analytics: SQL, Data Analysis, Data Profiling, Data Validation, Data Reconciliation, Data Quality, Data Mapping, Data Modeling, Data Warehousing, Data Marts, ETL/ELT Concepts, Ad Hoc Analysis
Reporting & Visualization: Power BI, Tableau, Dashboard Development, Executive Dashboards, Operational Reporting, KPI Reporting, Regulatory Reporting, Self-Service Analytics, Dashboard Wireframing, Drill-Down Analysis
Excel & Data Tools: Advanced Excel, Pivot Tables, XLOOKUP/VLOOKUP, Power Query, Data Validation, Complex Excel Models, Data Analysis
Database & Cloud Data Platforms: MySQL, PostgreSQL, Amazon Redshift, Google BigQuery, SQL-Based Reporting
Business Systems & Applications: Data Management Systems, Reporting Applications, Business Applications, Enterprise Reporting Platforms, Data Management Applications, System Documentation
Data Governance & Quality: Data Quality Management, Data Integrity, Data Reconciliation, Data Validation, Data Dictionaries, Business Glossaries, Reporting Controls, Data Access Controls
Requirements & Process: Requirements Elicitation, BRD, FRD, Functional Specifications, User Stories, Acceptance Criteria, Process Mapping, AS-IS/TO-BE Analysis, Workflow Analysis, Business Process Improvement
Testing & Delivery: UAT, Test Cases, Test Scenarios, Regression Testing, Defect Management, Release Validation, SDLC, Agile, Scrum, Waterfall
Tools: JIRA, Confluence, Microsoft Visio, SharePoint

PROFESSIONAL EXPERIENCE

Senior Business Analyst | Barclays, New York **July 2026 – Present**

- Lead requirements gathering and analysis for regulatory reporting, Finance, Risk, and Operations initiatives, establishing clear reporting objectives and target business outcomes.
- Prepare BRDs, FRDs, functional specifications, user stories, and acceptance criteria for enhancements to banking data, reporting, and analytics solutions.
- Carry out SQL-driven data analysis, profiling, validation, and reconciliation across banking data sources to raise reporting accuracy and overall data quality.
- Collaborate with BI teams to shape Power BI and Tableau dashboard requirements, including KPIs, filters, drill-downs, and role-based access needs.
- Create reporting requirements for management dashboards and operational analytics that support data-driven decisions across business functions.
- Perform ad hoc SQL analysis to trace reporting discrepancies, spot emerging trends, and share actionable insights with business and technology stakeholders.
- Assess reporting control gaps and data quality issues, raising requirement and system discrepancies ahead of production deployment to strengthen reporting reliability.
- Turn complex Finance, Risk, and Compliance requirements into actionable technical specifications for data and reporting development teams.
- Capture AS-IS and TO-BE workflows, business rules, data flows, and process dependencies to pinpoint opportunities for efficiency and reporting improvement.
- Work across Risk, Finance, Compliance, Technology, data engineering, and BI teams to monitor requirements, resolve open issues, and drive project delivery.

- Build UAT strategies, test scenarios, validation procedures, and acceptance criteria to confirm reporting functionality and data accuracy prior to release.
- Keep requirements, reporting definitions, business rules, and supporting documentation current with cross-functional stakeholders, improving user understanding and adoption.

Business Analyst | Yale New Haven Health, West Haven, CT **Mar 2025– Jun 2026**

- Drove requirements elicitation for enterprise reporting in patient access, scheduling, and capacity management through stakeholder interviews, workshops, and JAD sessions.
- Wrote BRDs, FRDs, user stories, acceptance criteria, and data mapping specifications for operational dashboards and reporting applications.
- Profiled and validated data from EHR and ancillary systems using SQL, uncovering data quality issues and reporting discrepancies.
- Specified Power BI dashboard requirements, including KPI calculations, filters, drill-down functionality, and Row-Level Security (RLS) to control data access.
- Contributed to operational dashboards tracking patient volume, throughput, scheduling activity, and service performance.
- Ran ad hoc data analysis and reconciliation to investigate reporting issues and deliver reliable information for operational decisions.
- Managed data dictionaries and business glossaries in Confluence, standardizing reporting terms and KPI definitions across service lines.
- Mapped AS-IS and TO-BE workflows, business rules, process dependencies, and data flows to uncover process improvement opportunities.
- Created UAT strategies, test scenarios, and validation procedures for reporting releases, coordinating stakeholder testing and business sign-off.
- Worked with data engineering and reporting teams to verify source data, transformation logic, and dashboard outputs against business requirements.
- Researched data quality and referential integrity gaps in reporting datasets, documenting root causes and supporting corrective actions.
- Collaborated with clinical, operational, technology, and reporting stakeholders to track requirements, resolve defects, and increase adoption of reporting outputs.

Business Analyst | CVS Health – Woonsocket, RI **May 2024 – Aug 2024**

- Elicited and documented business requirements for pharmacy performance and claims reporting, translating operational needs into BRDs, FRDs, user stories, and KPIs.
- Developed reporting requirements for turnaround time, queue aging, claim rejection, and pharmacy operational performance analytics.
- Wrote SQL queries for ad hoc analysis and reconciliation between operational data stores and enterprise data warehouse reporting datasets.
- Defined Power BI and Tableau dashboard requirements including wireframes, KPI calculations, drill paths, filters, and executive reporting needs.
- Analyzed claims rule and formulary logic changes to identify upstream and downstream system dependencies and reporting impacts.
- Performed data validation and control-total checks against source-system data to improve accuracy of nightly reporting and batch outputs.
- Validated report refreshes and scheduled data processing through data sanity checks, reconciliation, and exception analysis.
- Used Advanced Excel, Pivot Tables, and lookup functions to analyze operational datasets and support reporting investigations.
- Documented business rules, reporting logic, data dependencies, and process requirements to support development and maintenance of reporting solutions.
- Collaborated with business, technology, data, and QA teams to clarify requirements, investigate defects, and validate reporting changes.

- Supported UAT and regression validation for reporting enhancements, ensuring outputs aligned with documented business requirements.
- Analyzed operational reporting processes and identified opportunities to improve data quality, reporting efficiency, and stakeholder access to actionable information.

Business/Data Analyst |Tata Consultancy Services (TCS), India **May 2020 – Nov 2023**

- Delivered business analysis for insurance clients across policy administration, claims processing, and regulatory reporting systems.
- Gathered requirements through stakeholder workshops and translated business needs into BRDs, FRDs, user stories, use cases, and functional specifications.
- Created process flows and workflow diagrams using business rules and system dependencies to improve understanding of policy and claims processes.
- Used SQL to perform data validation, reconciliation, profiling, and root cause analysis for production reporting issues and regulatory extracts.
- Collaborated with data architects to define logical data models covering policy, coverage, premium, claim, and payment entities.
- Supported ETL and data warehouse initiatives by validating source-to-target mappings, transformation logic, data quality, and reporting outputs.
- Assisted with data mart and reporting requirements to support operational, management, and regulatory reporting needs.
- Analyzed reporting discrepancies and data exceptions to identify root causes and coordinate corrective actions with technology and data teams.
- Developed requirements for reporting enhancements and dashboards, ensuring KPIs and business rules aligned with stakeholder expectations.
- Collaborated with QA teams to develop test plans, requirements traceability matrices, functional tests, integration tests, and regression scenarios.
- Supported UAT activities by validating test results, coordinating defect resolution, and confirming business requirements before release.
- Maintained requirements and project documentation in JIRA and Confluence, improving traceability, communication, and stakeholder visibility throughout the SDLC.

EDUCATION

University of New Haven– West Haven, Connecticut
Master of Science in Data Science Jan 2024- Dec 2025

Guru Nanak Institute of Technology– Hyderabad, India
Bachelor of Engineering in Computer Science & Engineering July 2017– June 2021
